Gravity in Orbit How Things Fly Jun 27, 2013. A gigantic installation work by Tomás Saraceno, entitled “in orbit,” was just assembled last week in the Kunstsammlung Nordrhein-Westfalen in Düsseldorf. The installation is called “in orbit,” and it is an enormous net structure that has been suspended 20 metres above the ground. The net is made up of a series of interconnected platforms, each of which is designed to replicate the sensations of being in orbit. The net is suspended using a laser that has been designed to create the illusion of weightlessness. The installation is part of a larger exhibition called “In Orbit,” which is taking place at the Kunstsammlung Nordrhein-Westfalen from June 22 to July 28, 2013.

The exhibition is part of a larger project called “In Orbit,” which is an installation by the artist Tomás Saraceno. The project is designed to explore the concept of weightlessness and the sensations experienced by astronauts in orbit. The installation is part of a larger exhibition called “In Orbit,” which is taking place at the Kunstsammlung Nordrhein-Westfalen from June 22 to July 28, 2013.
